Forecast for Friday 21 Jul 2023

Weather: Some early sunshine, quickly replaced by variable amounts of cloud. Isolated and mostly light showers will develop from late morning onwards but these are expected to be few and far between, many areas remaining dry throughout. Cloud thickening later into the night.

Chance of cloud-free hill tops above 600m: 80-90% for most daylight hours, probably lowering to around 60% during the evening.

Low cloud and visibility: Cloud building through the morning will largely remain above the summits but some patches may drop to 600-700m at times, mainly in association with showers. Areas of cloud lowering further during the evening to around 500-600m. Generally very good visibility, but poor in early fog and moderate in any showers, becoming more notably poor in low cloud covering hills later.

Forecast for Saturday 22 Jul 2023

Weather: Cloud continuing to lower through the early hours of Saturday, with outbreaks of rain soon arriving and continuing throughout much of the day. Heavier pulses possible at times, perhaps particularly around mid/late morning and again into the evening. Remaining rather grey and drizzly in between.

Maximum wind: 25-30 mph southwesterly winds on the summits, gusting 35-40 mph.

Chance of cloud-free hill tops 600m: 60% at the very start of the day, quickly dropping to 20% by early morning and remaining so through the rest of the day.

Low cloud and visibility: Cloud bases widely lowering to 400-500m during the early hours with patches dropping as low as 100-200m in the west at times. Very poor visibility on the hills throughout, and at lower levels as well in heavy rain or drizzle.

Temperature: **Valleys:** Plus 11 Celsius, rising to plus 18 Celsius.
At 600m: Plus 8 Celsius, rising to plus 11 Celsius.
Freezing level: Above the summits.
